

GENERAL INFORMATION

The Floating Suction System is designed to eliminate the accumulated product on the surface of the stored product.

It is designed to work in tanks of any size, with all types of floating roof and with components compatible with any stored product.

The design is made for each specific case, guaranteeing a long life free of worries.

MATERIALS

- Main parts (swivel joint, pipes, supports): Aluminum, steel or stainless steel
- Floats: Aluminum, carbon steel or stainless steel
- Seals: FKM, Viton, PTFE.

TECHNICAL SPECIFICATIONS

- Design temperature: -15°C to + 80°C
- Design Pressure: 1 bar
- Test Pressure: 3 bar
- Flow: It is calculated for a flow velocity of no more than 2 m / s

OPTIONAL ACCESSORIES

- Level indicator
- Sampling lines
